DataCite Citation Workflow
Citations for all Research Outputs

	SHARE	CITE	CONNECT	STORE	DISCOVER	REPORT

RESEARCHER

SHARE: Researchers deposit data and other research outputs in a repository.

CITE: Researchers cite data and other research outputs in publication reference lists using DataCite DOIs. These are captured in publication DOI metadata.

CONNECT: The researcher or the repository updates the DataCite metadata and includes the DOI of the related publication.

References

DISCOVER: Researchers discover data and other research outputs

REPORT: Citation metrics are harvested and made available and allow researchers, repositories, institutions and funders to gain insight

REPOSITORY

The repository creates a DOI.

DATACITE

A DataCite DOI is registered.

STORE: Connections between DOIs are collected and stored in Event Data.

DataCite

HARVESTERS

Connections between DOIs are findable in discovery systems like DataCite Commons.
